#### 1 General

The controller type 3200 has 2 serial interfaces (RS-232).

- COM1 service interface, Visualisation Software 3200
- COM2 suitable for use with MODBUS

#### 1.1 Data cable

A null modem cable with the following pin assignment is required for the connection:

#### 1.2 Protocol 2014

The new ModBus protocol is available starting with software version V50.04 - B05.10. In this version, parameters can be written at the customer level. In addition, the element addresses have been reassigned and grouped thematically.

To activate the new functionality, the parameter "Use MODBUS protocol 2014?" "must be set to "YES". If the parameter is set to "NO", the functionality and the lement addresses remain the same as in the previous version to ensure compatibility with existing systems in the event of software updates.

⇒ See "Required settings" [page 4]

## 1.3 UART settings

The following settings are used for the serial interface:

Interface: RS-232
Baud rate: 57600
Data bits: 8
Stop bits: 1
Parity: NONE

Handshake: NONE

### 1.4 ModBus settings

#### 1.4.1 Supported protocols

The following ModBus protocols are supported:

- MODBUS RTU
- MODBUS ASCII

The protocol used must be set accordingly:

```
System \Rightarrow Set \Rightarrow General settings \Rightarrow MODBUS settings \Rightarrow MODBUS Protocol (1 - RTU / 2 - ASCII)
```

#### 1.4.2 Slave address

In a ModBus network, the boiler functions as a "slave". For this reason, a specific address must be set (address range 1 to 247).

```
\texttt{System} \Rightarrow \texttt{Set} \Rightarrow \texttt{General settings} \Rightarrow \texttt{MODBUS} \\ \texttt{address}
```

#### 1.4.3 Required settings

The following settings must be made to use the ModBus functionalities:

```
System ⇒ Set ⇒ General settings ⇒ MODBUS settings ⇒
```

- COM 2 is used as a MODBUS interface ⇒ YES
- Use MODBUS protocol 2014 ⇒ YES

#### 1.5 Data format

The data transferred are available as 16 bit integers. Conversions for specific parameters and signals can be found in the following tables.

### 2 Commands

Depending on the system used on site, there are various options for data exchange addressing. Either an offset range or the complete address range is used.

Taking for example the current values of the "flue gas temperature" (#30002) this means:

- Variant 1 Statement of the offset address (default): 0001
- Variant 2 Statement of the complete Modbus address: 30002
- Variant 3 Statement of the offset address (exception): 0002

Variant 1 is the one most often used. In this case the first value of the element is subtracted from the Modbus address (e.g. 30002 - 30001 = 0001; 30165 - 30001 = 0164). The addressing variant to be used can be found by consulting the documentation of the Modbus system used on site.

### 2.1 Error messages

Code	Name	Description
01	Illegal Function	Invalid function code. This error occurs even in cases where writing is attempted without having set the parameter "Use MODBUS protocol 2014" to "YES".
02	Illegal Data Address	Address outside of the valid range.  If an attempt is made to read an element not in the list, but which is nevertheless within the range, this error is not output, but is instead output as return value "-1".
03	Illegal Data Value	The number of elements queried at once is too high.
04	Slave Device Failure	The value to be written is outside of the valid range. (Note the minimum and maximum limits in the table.)

### 2.2 Digital outputs

All of the digital outputs in the list can be read.

• Function: Read Coil Status (FC=01)

Address range: 00001-01540

### 2.3 Digital inputs

All of the digital inputs in the list can be read.

Function: Read Input Status (FC=02)

Address range: 10001-10004

#### 2.4 Current values

All of the current values in the list can be read. A single query can be used to read a maximum of 122 values at a time.

- Function: Read Input Elements (FC=04)
- Address range:

### 2.5 Read/write parameters

All the parameters on the list can be read and all parameters labelled with "R/W" can be written. A single query can be used to read a maximum of 122 values at a time.

- Functions: Read Holding Elements (FC=03) for reading / Write Single Element (FC=06) for writing
- Address range:

IMPORTANT! Parameters can only be written with protocol 2014!

#### 2.6 ModBus boiler remote control

The flow temperature setpoints of the heating circuits as well as the DHW tank temperature setpoints can be specified using ModBus.

If one of the elements is written in the table, then the specified setpoint is active for all the available heating circuits and the DHW tank. If none of the elements is written for more than two minutes, the specified setpoint is deactivated again and the temperature setpoint calculation is executed once more according to the settings (heating curve and/or room sensor for heating circuits and temperatures for switching on/off for DHW tanks).

The setpoint 0 is used to switch off a DHW tank pump; a setpoint greater than 0 is used to switch it on. Heating circuits are switched on/off with the elements "Release heating circuits 1-18". If a heating circuit is released and the flow temperature setpoint is specified with 0° at the same time, then the heating curve set on the controller is used and the flow temperature is calculated. In contrast to stand-alone operation, the outside air temperature is not active. All values above 0° are interpreted directly as the flow temperature setpoint.

A minimum switching period of 10 minutes is set to prevent switching on/off too frequently. If an attempt is made to change the switching condition within this period, the controller ignores the setpoint and the value -1 is now returned in the response packet instead of the transferred value.

#### Example:

Time	Element writter	า	Return value
09:33	DHW tank 1 temperature setpoint 50°	ОК	100
09:34	DHW tank 1 temperature setpoint 0°	ОК	0
09:35	DHW tank 1 temperature setpoint 0°	ОК	0
09:36	DHW tank 1 temperature setpoint 50°	Lower for 10 min	-1
09:37	DHW tank 1 temperature setpoint 0°	ОК	0
09:39	Specified setpoint deactivated	Higher for 2 min	-1
09:40	DHW tank 1 temperature setpoint 0°	ОК	0
09:41	DHW tank 1 temperature setpoint 50°	Lower for 10 min	-1
09:43	DHW tank 1 temperature setpoint 50°	ОК	100
09:44	DHW tank 1 temperature setpoint 45°	OK	90
09:45	DHW tank 1 temperature setpoint 63°	OK	126
09:46	DHW tank 1 temperature setpoint 0°	Lower for 10 min	-1

If the heating circuit is switched off, the heating circuit will not be activated irrespective of the transferred setpoint. This parameter can be read and written as well at element 41031 for heating circuit 1, for example. Frost protection and running the safety pump (in the event that the temperature is too high) also take effect with the heating circuits even at a specified setpoint of 0°.

The DHW tank setpoint temperature is the temperature at which the DHW tank loading should be stopped. The switching temperatures are calculated as follows:

$$T_{\text{Start DHW tank loading}} = T_{\text{DHW tank setpoint ModBus}} - (T_{\text{DHW tank desired}} - T_{\text{Reload DHW tank below}})$$
 $T_{\text{Stop DHW tank loading}} = T_{\text{DHW tank setpoint ModBus}}$ 

This procedure ensures that the difference between the temperature for switching on and switching off is as high as that defined by the setting parameters.

Even if the activation of the heating circuits is still being performed by the boiler controller, the mode of the heating circuit can still be changed or read via the Modbus. The modes are changed or read using the elements 48047-48064.

Function: Write Single Element (FC=06) Address range

#### 2.7 Error buffer

When the error history is read out, only the current messages are transferred. If the value of an element returns 0xFFFF (65535), there is no message at this position.

Function: Read Input Registers (FC=04)

Address range: 33001-33020

### 2.8 System and boiler status

The current system and boiler status can be read out.

Function: Read Input Registers (FC=04)

Address range: 34001-34002

### 3 Values lists

The following tables contain the following column names:

- ID ⇒ Address of the ModBus element (ModBus ID)
- **DESCRIPTION** ⇒ Name or explanation of the signal
- UNIT ⇒ Unit of measurement: Unit for the signal value
- SCAL ⇒ SCALING: Conversion factor for raw value to real value
- DEC ⇒ DECIMAL PLACES: Number of decimal places
- MIN ⇒ MINIMUM: Minimum value of the signal
- MAX ⇒ MAXIMUM: Maximum value of the signal
- R/W ⇒ READ/WRITE: Parameter access rights (R/W = reading and writing rights, R = reading rights only)

### 3.1 Digital outputs

The following table shows all of the available digital outputs.

ID	DESCRIPTION
0	Fault message
1	Common fault relay
1000	Heating circuit pump 0
1030	Heating circuit pump 1
1060	Heating circuit pump 2
1090	Heating circuit pump 3
1120	Heating circuit pump 4
1150	Heating circuit pump 5
1180	Heating circuit pump 6
1210	Heating circuit pump 7
1240	Heating circuit pump 8
1270	Heating circuit pump 9
1300	Heating circuit pump 10
1330	Heating circuit pump 11
1360	Heating circuit pump 12
1390	Heating circuit pump 13
1420	Heating circuit pump 14
1450	Heating circuit pump 15
1480	Heating circuit pump 16
1510	Heating circuit pump 17
1540	Heating circuit pump 18

# 3.2 Digital inputs

The following table shows all of the available digital inputs.

ID	DESCRIPTION
10001	Door switch
10002	Hi-limit stat input
10003	E-stop input
10004	Boiler enable

### 3.3 Current values

The following table shows all of the available current values:

ID	DESCRIPTION	UN	SCAL	DEC
30001	Boiler temperature	°C	2	0
30002	Flue gas temperature	°C	1	0
30003	Board Temperature	°C	2	0

### 3.4 Parameters

The following table shows all of the available parameters:

ID	DESCRIPTION	UN	SCAL	DEC	MIN	MAX	R/W
40001	Boiler temperature setpoint	°C	2	0	70	90	R/W
40002	Shutdown if current boiler temperature is higher than boiler setpoint +	°C	2	0	2	20	R
40003	Maximum heating up time, during which HEATING status must be reached	min	60	0	1	60	R
40005	Minimum flue gas temperature	°C	1	0	85	300	R
40006	Maximum flue gas temperature	°C	1	0	85	300	R
40007	Minimum difference between flue gas- and boiler temperature in HEATING	°C	1	0	0	50	R
40008	Minimum boiler temperature to release all pumps	°C	2	0	60	80	R
40009	Always switch off at maximum boiler setpoint +	°C	2	0	0	20	R
40010	Primary air opening at 0% signal	%	1	0	0	100	R
40011	Primary air opening at 0% signal	%	1	0	0	100	R
40012	Opening of air flap at 0% control	%	1	0	0	100	R
40013	Primary air opening at 100% signal	%	1	0	0	100	R
40014	Opening of air flap at 100% control	%	1	0	0	100	R
40015	Secondary air opening at 0% signal	%	1	0	0	100	R
40016	Secondary air opening at 0% signal	%	1	0	0	100	R
40017	Secondary air opening at 100% signal	%	1	0	0	100	R
40018	Primary air opening at 100% signal	%	1	0	0	100	R
40019	Safety time for checking for air leaks	min	60	0	0	500	R
40020	Primary air during slumber	%	1	0	0	100	R
40021	Start increase of flue gas temperature	°C	1	0	0	100	R
40022	ID fan min in firewood operation	%	1	0	0	95	R
40023	ID fan min	%	1	0	0	95	R
40024	ID fan max	%	1	0	0	95	R
40025	Minimum primary air	%	1	0	0	100	R
40026	Secondary air maximum without lambda probe	%	1	0	0	150	R
40027	residual oxygen content setpoint	%	10	1	5	21	R
40028	Residual oxygen content, above which it switches to SHUTDOWN	%	10	1	10	21	R
40029	Residual oxygen content, above which fire is out	%	10	1	10	21	R
40030	Maximum loading rate	%	1	0	0	100	R
40031	Minimum loading rate	%	1	0	0	100	R
40032	Slide-in control	%	1	0	0	250	R
40033	Slide-in control	%	1	0	0	250	R
40034	Influencing factor for O2 controller		100	2	0	10	R
40035	No feed when residual O2 below	%	10	1	0	21	R
40036	Boiler output at flue gas temperature of 20°C	%	1	0	0	100	R
40037	100% boiler output from a flue gas temperature of	°C	1	0	0	300	R
40038	Pellet fan min	%	1	0	0	100	R
40039	Pellet fan max	%	1	0	0	100	R
40040	Minimum ID fan speed in firewood operation	%	1	0	0	100	R
40041	Minimum ID fan speed	%	1	0	0	100	R

40042         Feed time before ignition         s         1         0         0         1000         R           40043         Duration of pre-heading         s         1         0         0         0         8000         R           40044         Flue gas - Flue gas efference for start process         c         1         0	ID	DESCRIPTION	UN	SCAL	DEC	MIN	MAX	R/W

41789	DHW tank 6 - Load if temperature difference between boiler and DHW tank is	°C	2	0	3	50	R
41790	DHW tank 6 - Setpoint for temperature difference between boiler - DHW tank	°C	2	0	3	50	R
41791	DHW tank 6 - Minimum DHW tank speed	%	1	0	0	100	R
41792	Sensor input of DHW tank 06 top sensor		1	0	1	118	R
41793	Sensor input of DHW tank 06 solar reference sensor		1	0	1	118	R
41794	Pump output of DHW tank 06 pump		1	0	1	114	R
41795	DHW tank 6 - Control of DHW tank pump		1	0	0	81	R
41796	DHW tank 6 - Maximum DHW tank pump speed	%	1	0	0	100	R
41811	DHW tank 7 - Which buffer tank or heat distributor supplies the heat (0 = boiler)		1	0	0	4	R
41812	DHW tank 7 - Set DHW temperature	°C	2	0	10	100	R
41813	DHW tank 7 - Reload if DHW tank temperature is below	°C	2	0	1	90	R
41814	DHW tank 7 - Load if temperature difference between buffer tank and DHW tank is	°C	2	0	3	50	R
41815	DHW tank 7 - Residual heat use		1	0	0	1	R
41816	DHW tank 7 - Only load DHW tank once a day		1	0	0	1	R
41817	DHW tank 7 - Legionella heating activated		1	0	0	1	R
41818	DHW tank 7 - When should the legionella heating be carried out?		1	0	1	8	R
41819	DHW tank 7 - Load if temperature difference between boiler and DHW tank is	°C	2	0	3	50	R
41820	DHW tank 7 - Setpoint for temperature difference between boiler - DHW tank	°C	2	0	3	50	R
41821	DHW tank 7 - Minimum DHW tank speed	%	1	0	0	100	R
41822	Sensor input of DHW tank 07 top sensor		1	0	1	118	R
41823	Sensor input of DHW tank 07 solar reference sensor		1	0	1	118	R
41824	Pump output of DHW tank 07 pump		1	0	1	114	R
41825	DHW tank 7 - Control of DHW tank pump		1	0	0	81	R
41826	DHW tank 7 - Maximum DHW tank pump speed	%	1	0	0	100	R
41841	DHW tank 8 - Which buffer tank or heat distributor supplies the heat (0 = boiler)		1	0	0	4	R
41842	DHW tank 8 - Set DHW temperature	°C	2	0	10	100	R
41843	DHW tank 8 - Reload if DHW tank temperature is below	°C	2	0	1	90	R
41844	DHW tank 8 - Load if temperature difference between buffer tank and DHW tank is	°C	2	0	3	50	R
41845	DHW tank 8 - Residual heat use		1	0	0	1	R
41846	DHW tank 8 - Only load DHW tank once a day		1	0	0	1	R
41847	DHW tank 8 - Legionella heating activated		1	0	0	1	R
41848	DHW tank 8 - When should the legionella heating be carried out?		1	0	1	8	R
41849	DHW tank 8 - Load if temperature difference between boiler and DHW tank is	°C	2	0	3	50	R
41850	DHW tank 8 - Setpoint for temperature difference between boiler - DHW tank	°C	2	0	3	50	R
41851	DHW tank 8 - Minimum DHW tank speed	%	1	0	0	100	R
41852	Sensor input of DHW tank 08 top sensor		1	0	1	118	R
41853	Sensor input of DHW tank 08 solar reference sensor		1	0	1	118	R
41854	Pump output of DHW tank 08 pump		1	0	1	114	R
41855	DHW tank 8 - Control of DHW tank pump		1	0	0	81	R
41856	DHW tank 8 - Maximum DHW tank pump speed	%	1	0	0	100	R
42001	Buffer tank 1 - Heating circuit release from following buffer tank temperature	°C	2	0	20	100	R

ID	DESCRIPTION	UN	SCAL	DEC	MIN	MAX	R/W
42002	Buffer tank 1 - Residual heat use		1	0	0	1	R
42003	Buffer tank 1 - Temperature difference between boiler and border layer	°C	2	0	2	80	R
42004	Buffer tank 1 - Minimum buffer tank pump speed	%	1	0	0	100	R
42005	Buffer tank 1 - Boiler start if there is a difference between the boiler temperature setpoint and the top storage tank temperature	°C	2	0	5	70	R
42006	Buffer tank 1 - Buffer tank fully loaded if temperature difference between boiler and bottom buffer tank	°C	2	0	3	50	R
42007	Puffer 1 - Sensor input of storage tank top sensor		1	0	1	118	R
42008	Puffer 1 - Sensor input of storage tank middle sensor		1	0	1	118	R
42009	Puffer 1 - Sensor input of storage tank bottom sensor		1	0	1	118	R
42010	Puffer 1 - Pump output of storage tank pump		1	0	0	114	R
42011	Buffer tank 1 - Control of storage tank pump		1	0	0	8	R
42012	Buffer tank 1 - Maximum buffer tank pump speed	%	1	0	0	100	R
42013	Puffer 1 - Sensor input of storage tank sensor 3		1	0	1	118	R
42014	Buffer tank 1 - Mid buffer tank controller active? If No the sensor is only a display		1	0	0	1	R
42015	Buffer tank 1 - SP-Dual - In pellet mode stop buffer tank loading bec. of middle buffer tank sensor		1	0	0	1	R
42016	Buffer tank 1 - Enable heating circuit pump 0 according to top buffer temp.		1	0	0	1	R
42017	Buffer tank 1 - If the boiler is active then charge all buffer tanks		1	0	0	1	R
42018	Buffer tank 1 - Buffer - Buffer difference	°C	2	0	10	20	R
42019	Puffer 1 - Sensor input of storage tank sensor 2		1	0	1	118	R
42020	Buffer charge is 100 % at boiler setpoint - parameter	°C	2	0	10	60	R
42021	Buffer charge is 0 % at the following temperature	°C	2	0	5	80	R
42022	Start of buffer tank charging from charge	%	1	0	0	100	R
42023	Puffer 1 - Pump outlet for buffer tank relief valve		1	0	0	130	R
42024	Buffer tank 1 - Top buffer temp. when the start-up relief valve switches to bottom buffer	°C	2	0	10	100	R
42025	Control buffer tank requests according to system environment		1	0	0	1	R
42026	According to system environment, buffer tank request shutdown delay of	min	60	0	0	120	R
42027	100 % boiler output from a buffer charge of	%	1	0	0	100	R
42028	0 % boiler output if buffer charge is over	%	1	0	0	100	R
42029	Buffer tank 1 - Volume of the usedbuffer tank	I	1	0	500	8000	R
42030	Buffer tank 1 - Is a hygienic layered tank used?		1	0	0	1	R
42031	Refill calculation active (Sensors has to be assigned correctly)		1	0	0	1	R
42032	Puffer 1 - Pump outlet for buffer tank zone valve		1	0	0	130	R
42033	Buffer tank 1 - Invert pump outlet for buffer relief valve		1	0	0	1	R
42034	Buffer tank 1 - Invert pump outlet for buffer zone valve		1	0	0	1	R
42041	Buffer tank 2 - Heating circuit release from following buffer tank temperature	°C	2	0	20	100	R
42042	Buffer tank 2 - Residual heat use		1	0	0	1	R
42043	Buffer tank 2 - Temperature difference between boiler and border layer	°C	2	0	2	80	R
42044	Buffer tank 2 - Minimum buffer tank pump speed	%	1	0	0	100	R
42045	Buffer tank 2 - Boiler start if there is a difference between the boiler temperature setpoint and the top storage tank temperature	°C	2	0	5	70	R
42046	Buffer tank 2 - Buffer tank fully loaded if temperature difference between boiler and bottom buffer tank	°C	2	0	3	50	R

ID	DESCRIPTION	UN	SCAL	DEC	MIN	MAX	R/W

# 3.5 ModBus boiler remote control

The addresses for the ModBus boiler remote control are in the following list. The elements can be written with the command 06 and can be read using the command 03. The flow temperature setpoints can be found with the current values.

ID range	DESCRIPTION	SCAL	MIN	MAX
48001 - 48018	Flow temperature setpoint for heating circuits 1-18	2	0	75
48019 - 48026	DHW tank temperature setpoint for DHW tanks 1-8	2	0	65
48029 - 48046	Enable heating circuits 1-18	1	0	1
48047 - 48064	Mode, heating circuits 1-18	1	0	5

The following options are available for the mode of the heating circuit:

- 0 ... Off
- 1 ... Automatic
- 2 ... Extra heating
- 3 ... Setback
- 4 ... Continuous setback
- 5 ... Party mode

### 3.6 Error buffer

All of the current errors can be found in the following list.

ID	DESCRIPTION
33001	Error 1 / No error = 0xffff (65535)
33002	Error 2
33003	Error 3

## 3.6.1 Texts for error history

The following list is used to match the transferred error ID to the corresponding errors.

ID	DESCRIPTION
0	Overheat Thermostat (STL) or EMERGENCY OFF activated
1	Boiler temperature sensor faulty
2	Primary air flap blocked
3	Secondary air flap blocked
4	Boiler has air leak
5	Test combustion chamber overpressure monitor
6	Back-fire slide valve does not close
7	Back-fire slide valve does not open
8	Grate drive defective
9	Grate fault
10	Grate cleaning fault
11	Igntion not successful
12	Safety time expired, oxygen content too high for too long
13	Safety time expired, flue gas temperature too low for too long
14	Boiler door open too long
15	Jam sensor covered for longer than 5 minutes
16	Check fuel outfeeder
17	Check fuel store
18	Return feed temperature faulty
19	Return feed temperature too low for more than 30 minutes
20	Remote control heating circuit 1 faulty
21	Flow temperature sensor heating circuit 1 faulty
22	Remote control heating circuit 2 faulty
23	Flow temperature sensor heating circuit 2 faulty
24	External temperature sensor faulty
25	EMERGENCY OFF switch was activated
26	Remote control heating circuit 3 faulty
27	Remote control heating circuit 4 faulty
28	Remote control heating circuit 5 faulty
29	Remote control heating circuit 6 faulty
30	Remote control heating circuit 7 faulty
31	Remote control heating circuit 8 faulty
32	Remote control heating circuit 9 faulty
33	Remote control heating circuit 10 faulty
34	Remote control heating circuit 11 faulty
35	Remote control heating circuit 12 faulty
36	Remote control heating circuit 13 faulty
37	Remote control heating circuit 14 faulty
38	Remote control heating circuit 15 faulty
39	Remote control heating circuit 16 faulty

ID	DESCRIPTION
40	Remote control heating circuit 17 faulty
41	Remote control heating circuit 18 faulty
42	Flow temperature sensor in heating circuit 3 faulty

54	Flow temperature sensor in heating circuit 15 faulty
55	Flow temperature sensor in heating circuit 16 faulty
56	Flow temperature sensor in heating circuit 17 faulty
57	Flow temperature sensor in heating circuit 18 faulty
58	Bus module faulty before power switched off
59	ID fan does not rotate, in spite of full activation
60	Sensor in DHW tank 1 faulty
61	Communication with pellet module faulty
62	
63	001 EEPROM Read error
64	002 EEPROM Zero checksum
65	003 EEPROM Read error
66	004 EEPROM Incorrect software version
67	005 EEPROM Incorrect parameter length
68	006 EEPROM Read error
69	007 EEPROM Incorrect checksum
70	008 EEPROM Write error
71	009 EEPROM Write error
72	010 Config. List faulty
73	Sensor in DHW tank 2 faulty
74	Sensor in DHW tank 3 faulty
75	Sensor in DHW tank 4 faulty
76	Sensor in DHW tank 5 faulty
77	Sensor in DHW tank 6 faulty
78	Sensor in DHW tank 7 faulty
79	Sensor in DHW tank 8 faulty
80	Bottom sensor in DHW tank 1 faulty
81	Bottom sensor in DHW tank 2 faulty
82	Bottom sensor in DHW tank 3 faulty

ID	DESCRIPTION
83	Bottom sensor in DHW tank 4 faulty
84	Bottom sensor in DHW tank 5 faulty
85	Bottom sensor in DHW tank 6 faulty
86	Bottom sensor in DHW tank 7 faulty
87	Bottom sensor in DHW tank 8 faulty
88	Top sensor in buffer tank 1 faulty
89	Top sensor in buffer tank 2 faulty
90	Top sensor in buffer tank 3 faulty
91	Top sensor in buffer tank 4 faulty
92	Middle sensor in buffer tank 1 faulty
93	Middle sensor in buffer tank 2 faulty
94	Middle sensor in buffer tank 3 faulty
95	Middle sensor in buffer tank 4 faulty
96	Bottom sensor in buffer tank 1 faulty
97	Bottom sensor in buffer tank 2 faulty
98	Bottom sensor in buffer tank 3 faulty
99	Bottom sensor in buffer tank 4 faulty
100	Sensor in backup boiler faulty
101	Sensor in collector faulty
102	Sensor in additional boiler faulty
103	Fill level cannot be interpreted correctly
104	Bypass flap could not be opened
105	Bypass flap could not be closed
106	Runtime for filling was exceeded
107	Delivery screw is blocked at the suction point
108	Bypass flap could neither be closed nor opened
109	Ignition attempt failed, light by hand !
110	ID fan motor protection switch failed
111	Stoker motor protection switch failed
112	Feed screw motor protection switch failed
113	Back-burn flap opens too quickly
114	Back-burn flap closes too quickly
115	No/both end positions of back-burn flap activated
116	Rotary valve motor protection switch tripped
117	Lambda probe defective
118	Flue gas temperature sensor defective
119	Combustion chamber temperature sensor defective
120	Light barrier in gravity shaft defective
121	Drop box cover open
122	Boiler door open too long or underpressure transmitter defective
123	Grate does not open
124	Safety time expired because of fill level sensor in suction cyclone.
125	Motor protection delivery screw

ID	DESCRIPTION
126	Stoker error
127	Delivery screws error
128	DANGEROUS status possible
129	Wood chip module failed -> immediate shutdown
130	Suction module failed \n-> immediate shutdown
131	Load fuel as per instructions
132	Return sensor for network pump defective
133	Light barrier in gravity shaft of delivery screw defective(full)
134	Drop box cover of delivery screw open
135	Delivery screw motor protection switch tripped
136	Light barrier in gravity shaft of intermediate screw 1 defective(full)
137	Drop box cover of intermediate screw 1 open
138	Intermediate screw 1 motor protection switch tripped
139	Clean /check burner
140	Grate will not close
141	Back-burn flap will not close
142	Back-burn flap won't open
143	Rotary valve frequent overcurrent
144	Stoker screw frequent overcurrent
145	Feed screw frequent overcurrent
146	Control restart
147	Return feed sensor for feeder 1 faulty
148	Return feed sensor for feeder 2 faulty
149	Return feed sensor for feeder 3 faulty
150	Return feed sensor for feeder 4 faulty
151	Maximum feed after alteration re-calculated and limited
152	Light barrier in gravity shaft of intermediate screw 1 defective (empty)
153	Light barrier in gravity shaft of delivery screw defective (empty)
154	Slide valve blocked
155	Error in boiler and fuel selection
156	Self test error during preparation
157	Boiler air leak detected by feed
158	Boiler air leak detected by O2 monitoring
159	Sensor for circulation pump faulty
160	Sensor for solar heat exchanger secondary flow faulty
161	Sensor for solar collector return faulty
162	Lambda probe defective
163	Troubleshooting interrupted
164	Heat source sensor of difference controller defective
165	Heat sink sensor of difference controller defective
166	Variant 3, a buffer tank and a manifold with the same number activated
167	Probe switching due to lack of pellets or jam sensor
168	Supply bin empty, please top up pellets

ID	DESCRIPTION
169	Ash box full, please empty
170	Grate drive has overcurrent, please wait 5 minutes
171	Sensor 1 faulty
172	Storage tank solar reference sensor faulty
173	Ash box full, please empty
174	Stoker motor not plugged in or not functioning
175	Broadband probe not plugged in or heating of probe defective
176	Sensor element of the broadband probe faulty or short-circuit
177	Stoker motor not plugged in or not functioning
178	Feed screw not plugged in or not functioning
179	Ash box too long open or removed
180	Under pressure in status Preparation too low
181	Air flap blocked
182	Return flow and DHW tank loading through HCP0 is not possible (same sensor input)
183	Frequency convertor faulty
184	Temperature monitoring of fan activated (Klixon)
185	left part of grate will not close
186	right part of grate will not close
187	left part of grate will not open
188	right part of grate will not open
189	Motor protection of combustion air blower fan activated
190	Motor protection of boiler charging pump activated
191	Too often overcurrent discharge screw
192	Too often overcurrent intermediate screw
193	Automatical room air flap will not open
194	Combustion air supply faulty or blocked
195	Safety time because of minimum sensor in cyclone expired
196	ID fan switch not in position AUTO
197	Motor protection sliding floor tripped
198	Oil level in power pack too low
199	High oil temperature in power pack
200	Key switch for hydraulic room not in position AUTO
201	Sliding floor averfill
202	Water temperature in pellet burner (Sensor 1) too high
203	WOS motor is blocked or not connected
204	Air flow through is too low or air supply is faluty
205	Self test error during preparation
206	Overfilling safety device of rotary valve is active
207	Rotary valve is not connected or not functioning
208	Set numbers of cycles at sliding floor is exceeded
209	Boiler standard values aren't adopted (Menu Set> General settings)
210	Undergrate thermostat triggered
211	Under pressure in status Preparation too high

ID	DESCRIPTION
212	Grate drive reports that both end positions are acitve
213	Check feed system
214	Module update failed, please replace pellet module
215	Ready-to-measure state could not be achieved
216	Ready-to-measure state could not be maintained
217	Minimum level setting in fuelstore room not reached
218	Invalid parameter settings for feed system
219	Light barrier permanently covered or faulty
220	Temperature exceeded at heat exchanger
221	Motor protection switch fallen off rotary agitator
222	FC operating signal dropped from FGR blower fan
223	E-filter safety switch open
224	E-filter water sensor error
225	Excessive temperature HV box
226	E-filter communication error
227	HV error E-filter
228	Operating signal from FC ID fan faulty
229	Fault in SoDC pump
230	Motor protection switch Screw 1 fallen onto LB
231	Motor protection switch Screw 2 fallen onto LB

332	HK12 - flow temperature too high for too long
333	HK13 - flow temperature too high for too long
334	HK14 - flow temperature too high for too long
335	HK15 - flow temperature too high for too long
336	HK16 - flow temperature too high for too long
337	HK17 - flow temperature too high for too long
338	HK18 - flow temperature too high for too long
339	DHW tank solar reference sensor faulty
340	FGR pressure regulation flap blocked

ID	DESCRIPTION
341	Pressure in FGR pressure duct outside the permitted range for too long
342	Grate differential pressure too low for too long
343	Slide-on duct cooling over temperature
344	Control of suction unit defective, replace pellet module
345	Tipping grate 1 will not close
346	Tipping grate 1 will not open
347	Grate drive 1 reports that both end positions are active
348	Tipping grate 2 will not close
349	Tipping grate 2 will not open
350	Grate drive 2 reports that both end positions are active
351	Temperature increase at sensor 1 is too low
352	FGR primary air flap blocked
353	FGR secondary air flap blocked
354	Room temperature sensor of heating circuit 1 faulty
355	Room temperature sensor of heating circuit 2 faulty
356	Room temperature sensor of heating circuit 3 faulty
357	Room temperature sensor of heating circuit 4 faulty
358	Room temperature sensor of heating circuit 5 faulty
359	Room temperature sensor of heating circuit 6 faulty
360	Room temperature sensor of heating circuit 7 faulty
361	Room temperature sensor of heating circuit 8 faulty
362	Room temperature sensor of heating circuit 9 faulty
363	Room temperature sensor of heating circuit 10 faulty
364	Room temperature sensor of heating circuit 11 faulty
365	Room temperature sensor of heating circuit 12 faulty
366	Room temperature sensor of heating circuit 13 faulty
367	Room temperature sensor of heating circuit 14 faulty
368	Room temperature sensor of heating circuit 15 faulty
369	Room temperature sensor of heating circuit 16 faulty
370	Room temperature sensor of heating circuit 17 faulty
371	Room temperature sensor of heating circuit 18 faulty
372	011 EEPROM checksum 2 incorrect
373	STL, min. pressure, max. pressure or water shortage safety device has triggered.
374	FGR flap blocked
375	Return temperature too high
376	Boiler door open or underpressure transmitter defective
377	ID fan turns without control
378	Please heat up the boiler now to prepare for chimney sweep measurement!
379	Boiler ret. circ. temp. above boiler temperature too long
380	Check inlet
381	Check condensate discharge
382	Underpressure too low
383	Check gate valve direction.

ID	DESCRIPTION
384	Ash container full or WOS blocked
385	Stoker drive draws current without control
386	Self test error during preparation

# 3.7 System and boiler status

The following addresses are used for the values:

ID	DESCRIPTION
34001	System status
34002	Boiler status

## 3.7.1 Texts for system status

The following list is used to identify the transferred system status.

ID	DESCRIPTION
0	Continuous load
1	Domestic hot water
2	Automatic
3	Firewood operation
4	Cleaning
5	Boiler off
6	Extra heating
7	Chimney sweep
8	Cleaning

### 3.7.2 Texts for boiler status

The following list is used to identify the transferred boiler status.

ID	DESCRIPTION
0	FAULT
1	Boiler off
2	Heating up
3	Heating
4	Slumber
5	Off
6	Door open
7	Preparation
8	Pre-heating
9	Ignition
10	Shutdown wait
11	Shutdown wait 1
12	Shutdown feed 1
13	Shutdown wait 2
14	Shutdown feed 2
15	Cleaning
16	Wait 2h
17	Suction / Heating
18	Ignition fault
19	Standby

ID	DESCRIPTION
20	Close grate
21	Empty stoker
22	Pre-Heating
23	Suction
24	Close BBF
25	Open BBF
26	Tilt grate
27	Warming-Up / Ignition
28	Empty feed
29	Stoker fill
30	Warming-Up Lambda Probe
31	FD fan run-on I
32	FD fan run-on II
33	Stopped
34	Additional Ignition
35	Ignition wait
36	TS: Close BBF
37	TS: Ventilate boiler
38	TS: Ignition
39	TS: min. feed
40	Close BBF
41	FAULT: HL/ES
